## REWIRING THE ADDICTED BRAIN WITH EMDR WORKSHOP

Addiction is costly, not only for our clients, but for their families, friends, employers, and communities as well. And when we consider the cost of lives lost to addiction, the toll can be overwhelming. While there are a number of programs targeted toward helping people overcome addiction, recovery often remains elusive or short-lived for too many. By applying brain-wise EMDR-based techniques to our work with addiction, we can help clients change their neurobiology and rewire the addicted brain toward health and wholeness. In this workshop, Dr. Parnell integrates her innovative Attachment-Focused EMDR into the treatment of addiction – one of the most clinically challenging therapeutic issues practitioners face. Dr. Parnell developed techniques that are brain-wise, resource-based, trauma-informed, and Attachment-Focused that you can use to help clients break the addiction cycle.
